武汉市卫生健康委员会关于不明原因的病毒性肺炎情况通报

发布机构: 武汉市卫生健康委员会 | 发布时间: 2020-01-05 20:33:24 | 点击数: 435 | 字号: 大 中 小

2019年12月31日以来,我委在全市开展了不明原因的病毒性肺炎病例搜索和回顾性调查工作。截至2020年1月5日8时,我市共报告符合不明原因的病毒性肺炎诊断患者59例,其中重症患者7例,其余患者生命体征总体稳定,目前所有患者均在武汉市医疗机构接受隔离治疗,无死亡病例。在59例患者中,病例最早发病时间为2019年12月12日,最晚发病时间为12月29日;已经追踪到163名密切接触者并行医学观察,密切接触者的追踪工作仍在进行中。

流行病学调查显示,部分患者为武汉市华南海鲜城(华南海鲜批发市场)经营户。截至目前,初步调查表明,未发现明确的人传人证据,未发现医务人员感染。已排除流感、禽流感、腺病毒、传染性非典型肺炎(SARS)和中东呼吸综合征(MERS)等呼吸道病原。病原鉴定和病因溯源工作仍在进一步进行中。

目前,武汉市在国家和湖北省的支持下,已经采取以下主要防控措施:一是全力救治患者。二是对所有病例均开展隔离治疗。三是继续在全市医疗机构开展相关病例搜索和回顾性调查。四是认真开展密切接触者追踪,对已经追踪到的密切接触者按规定落实医学观察,目前没有发现发热等异常症状。五是对华南海鲜城采取休市措施,并开展环境卫生处置和进一步的卫生学调查。六是积极开展流行病学调查。七是配合国家和省开展病原鉴定(包括核酸检测和病毒分离培养)和病因溯源,防控工作正有序进行。

专家提示,目前我市正处于冬春季传染病高发季节,市民要注意保持室内空气流通,避免到封闭、空气不流通的公众场合和人员多集中地方,必要时可佩戴口罩。如有发热、呼吸道感染症状,特别是持续发热不退,及时到医疗机构就诊。

The full text is as follows:

Since December 31, 2019, our commission has carried out search and retrospective investigations of unexplained viral pneumonia cases throughout the city. As of 8:00 on January 5, 2020, our city has reported 59 patients with unexplained viral pneumonia diagnoses, including 7 severely ill patients. The vital signs of the remaining patients are generally stable. All patients are currently being isolated in Wuhan medical institutions. Treatment, no deaths. Among the 59 patients, the earliest onset time of the case was December 12, 2019, and the latest onset time was December 29; 163 close contacts have been traced and medical observations have been made, and the tracing of close contacts is still in progress .

Epidemiological investigations showed that some patients were operating households in Wuhan South China Seafood City (South China Seafood Wholesale Market). So far, preliminary investigations have shown that no clear evidence of human-to-human transmission has been found, and no medical personnel have been infected. Respiratory pathogens such as influenza, avian influenza, adenovirus, infectious atypical pneumonia (SARS) and Middle East respiratory syndrome (MERS) have been excluded. Pathogen identification and cause tracing work is still in progress.

Currently, Wuhan City, with the support of the state and Hubei Province, has taken the following main prevention and control measures: First, it will spare no effort to treat patients. The second is to carry out isolation treatment for all cases. The third is to continue to carry out relevant case searches and retrospective investigations in medical institutions throughout the city. The fourth is to earnestly carry out close contact tracing, and implement medical observations on close contacts that have been traced. No abnormal symptoms such as fever have been found so far. Fifth, take measures to close the market for South China Seafood City, and carry out environmental sanitation disposal and further hygiene investigations. Sixth, actively carry out epidemiological investigations. Seventh, to cooperate with the state and the province to carry out pathogen identification (including nucleic acid testing and virus isolation and culture) and trace the source of the cause, and prevention and control work is proceeding in an orderly manner.

Experts reminded that the city is currently in the season of high incidence of infectious diseases in winter and spring. Citizens should pay attention to maintaining indoor air circulation, avoid closed, airless public places and crowded places, and wear masks when necessary. If you have fever or respiratory tract infection symptoms, especially if the fever persists, go to a medical institution promptly
